

FISCHER AMPS

Directions **Custom Musicians Earplugs** **for Ultimate Ears TripleFi 10 or Fischer Amps FA-1, FA-2, FA-3** **In Ear Earphones and/or Filters**

Colour Coding of Earplugs:

The earplug marked red is for the right ear, the earplug with a blue mark is for the left ear.

Inserting the Earphones into the Earplugs:

Remove the eartips from the earphones and insert the earphone marked (L) into the earplug with the blue marking; insert the earphone marked (R) into the earplug with the red marking.

Inserting the Earplugs into the Ears:

Insert the earplug with put-on earphone into the ear by slightly twisting it. Then turn the earphone in the correct angle within the earplug so that the cable outlet of the earphone points to the top. This allows that the flexible ear loops of the cables can be put over the auricle. The earphone should be placed in the earplug so that there is no strain at the earplug (see picture).

Reverse Mode (applies for Ultimate Ears earphones only):

The Ultimate Ears earphones have a relatively large size. Depending on the anatomy of the auricle and the auditory canal, it might be better to insert the earphones in reverse mode into the earplugs, i. e. the right earphone into the left earplug and vice versa.

The earphone then turns slightly to the back.

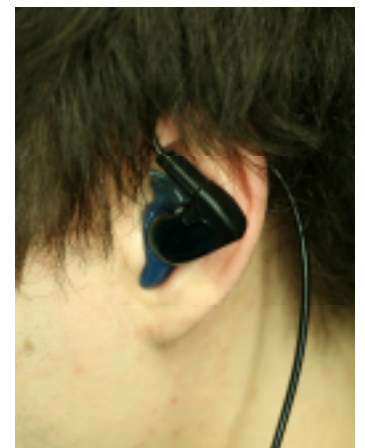

In order to have the correct panorama left/right, replug the cables at the earphones. For doing so plug the cable marked (R) onto the earphone marked (L) and vice versa. Please make sure that the cables have the same polarity as before, i. e. the left/right markings at the cable have to point towards the head.

Inserting the Filter Buds:

Instead of the earphone, filter buds can be inserted into the Earplugs. Then the Earplugs function as custom hearing protection with high sound quality.

Suitable filters are available with -6, 9, 12, 18 and 25 dB noise reduction.
